

Analytics Studio

UI / UX Design Document (UXD)

Version 2.0 (Final MVP)

Project: Analytics Studio

Internship: ReadyNest – Week 6 Final Project

Design Language: Minimal • Enterprise • Typography-Driven • Monochrome First

Primary Platform: Desktop Web

Design Goal: Build a premium Decision Intelligence Platform that feels like modern enterprise software rather than a traditional analytics dashboard.

1. Design Vision

Analytics Studio is designed to make complex business analytics feel simple.

Instead of overwhelming users with charts and numbers, the interface guides them through a structured decision-making workflow.

Every screen should answer one question before moving the user to the next.

The product should feel calm, precise, and trustworthy.

2. Design Inspiration

The interface draws inspiration from modern software products known for clarity, simplicity, and consistency.

Primary references include:

- Vercel
- Linear
- Notion
- Stripe Dashboard
- GitHub
- Microsoft Fabric

These products emphasize readability, spacing, typography, and restrained visual design rather than decorative effects.

3. Design Philosophy

Analytics Studio follows five core principles.

Minimal by Default

Only display what users need at the current step.

Avoid unnecessary widgets, colors, and decorative elements.

Data First

Data is always the primary visual element.

The interface should support understanding, not compete for attention.

One Clear Action

Every page has one primary objective.

Users should never wonder what to do next.

Progressive Disclosure

Information is revealed gradually.

Example:

↓

Insight

↓

Recommendation

↓

Counter Analysis

Enterprise Quality

The application should resemble premium business software, not an academic project.

4. Visual Personality

The product should feel

- Professional
- Modern
- Calm
- Intentional
- Structured
- Premium

It should never feel

- Colorful
 - Playful
 - Gamified
 - Overdesigned
 - Busy
-

5. Color System

Primary Palette

Background

#000000

Surface

Card

Elevated Surface

Border

Primary Text

Secondary Text

Muted Text

Accent Colors

Primary Interactive

Success

Warning

Danger

Accent colors should only communicate interaction or status.

The interface remains monochrome-first.

6. Typography

Primary Font

Geist

Fallback

Inter

Typography creates hierarchy through

- spacing
- font weight
- alignment

not through excessive font sizes or colors.

Type Scale

Page Title

36px

Bold

Section Heading

24px

Semi Bold

Card Title

18px

Medium

Body

16px

Regular

Caption

14px

Muted

Label

13px

Medium

7. Layout System

The application follows a fixed desktop layout.

The sidebar remains fixed.

The content area scrolls independently.

8. Grid System

Maximum content width

1440px

Content padding

32px

Card spacing

24px

Section spacing

48px

Base spacing unit

8px

9. Navigation

Sidebar

Contains

- Overview
- Analytics
- Predictions
- Report
- Decision Center

Bottom

- Analytics Studio
- Version
- Theme Toggle

The active page uses a solid background with strong contrast.

Only one navigation item is highlighted.

Top Navigation

Left

- Page Title
- Dataset Name

Right

- Upload Dataset
- Session Status
- Theme Toggle

The top bar remains minimal.

10. Page Structure

Every page follows the same structure.

Consistency is more important than visual variety.

11. Overview Page

Purpose

Provide an executive snapshot of the uploaded dataset.

Sections

- Dataset Summary
- Quality Score
- KPI Cards
- Alerts
- Quick Actions

Quick Actions

- View Analytics
 - Generate Prediction
 - Generate Report
-

12. Analytics Page

Purpose

Explore and understand the dataset.

Sections

- Summary Statistics
- Correlation Matrix
- Charts Grid
- Outlier Analysis

Each chart includes

which opens Executive Advisor.

13. Predictions Page

Purpose

Present model performance.

Sections

- Problem Type
- Model Metrics
- Feature Importance
- Prediction Preview

Primary Action

Generate Executive Report

14. Report Page

Purpose

Provide a document-style reading experience.

Layout

Centered

Maximum width

900px

Sections

- Dataset Summary
- Analytics Summary
- Key Findings
- Recommendations
- Counter Analysis
- Conclusion

Bottom

Download PDF

Stretch

15. Decision Center

Purpose

Support business decision making.

Layout

The recommendation should always appear before risks.

Counter Analysis is visually separated but not alarming.

16. Cards

Cards are the primary interface element.

Design

- Thin border
- Soft radius
- Flat appearance
- Large internal padding
- Minimal shadow

Cards should organize information without dominating the interface.

17. Charts

Charts are presented inside cards.

Requirements

- Responsive
- Interactive tooltips
- Clean legends
- Minimal grid lines
- One primary accent color

Avoid visual clutter.

18. Buttons

Primary

Solid accent color

White text

Secondary

Outlined

Ghost

Text only

Buttons use concise action-oriented labels.

Examples

Upload Dataset

Generate Report

Run Simulation

Explain Chart

19. Forms

Input Fields

- Rounded corners
- Clear labels

- Inline validation
- Full width

Upload

Drag and Drop

-

Browse Files

Decision Simulator

Numeric input

or

Slider

20. Tables

Requirements

- Sticky header
- Sorting
- Search
- Pagination

No zebra striping.

Hover state only.

21. Empty States

Every empty page includes

- Minimal icon
- Short message
- Primary action

Example

No dataset uploaded.

↓

Upload Dataset

22. Loading States

Use skeleton loaders where practical.

Display progress for

- Upload
- Analytics
- Prediction
- Report Generation

Avoid blocking the interface.

23. Notifications

Toast notifications appear in the top-right corner.

Examples

Dataset uploaded successfully.

Prediction completed.

Report generated.

Simulation completed.

24. Executive Advisor Experience

The user clicks

Explain Chart

or

Explain Insight

A side panel or modal opens with:

- Business Explanation
- Supporting Evidence
- Related Insight
- Suggested Next Step

This interaction is contextual, not conversational.

25. Decision Flow

Choose Scenario

Users should immediately understand both the potential benefits and associated risks.

26. Motion Design

Animations are subtle.

Duration

200–250 ms

Effects

- Fade
- Slide
- Opacity

Avoid bouncing, scaling, or distracting effects.

Motion should reinforce interaction, not draw attention.

27. Icons

Library

Lucide React

Icons accompany navigation and key actions.

Avoid decorative illustrations.

28. Component Library

Global components include:

- Sidebar
- Top Navigation
- Page Header
- Card
- KPI Card
- Chart Card
- Badge
- Table
- Modal
- Drawer
- Toast
- Progress Bar
- Empty State
- Skeleton Loader
- Button
- Input
- Select
- Tooltip

All components should be implemented using **shadcn/ui** where appropriate and customized to match the product's design system.

29. Responsive Strategy

Primary target

Desktop

Minimum width

1280px

Recommended

1440px+

Tablet

Collapsed sidebar

Mobile

Not included in MVP

30. Accessibility

Minimum WCAG AA contrast.

Support

- Keyboard navigation
 - Focus indicators
 - Semantic HTML
 - Accessible labels
 - Screen reader compatibility for forms and navigation
-

31. UX Writing

Tone

Professional

Direct

Concise

Examples

Dataset uploaded successfully.

Unable to generate predictions.

Select another target column.

Avoid enthusiastic or playful language.

32. Design Tokens

Token	Value
Font	Geist / Inter

Radius	12px / 16px
Base Spacing	8px
Border	1px
Backgrou nd	#000000
Surface	#0A0A0A
Card	#111111
Primary Accent	#3B82F6
Animation	200–250 ms

33. Design Acceptance Criteria

The UI is complete when:

- ☒ Every page follows the same layout system.
 - ☒ Navigation is consistent across the application.
 - ☒ Visual hierarchy is driven by spacing and typography.
 - ☒ All interactions provide clear feedback.
 - ☒ Charts remain readable and uncluttered.
 - ☒ Reports are optimized for reading and printing.
 - ☒ Decision Center communicates recommendations and risks clearly.
 - ☒ Loading, empty, and error states are thoughtfully designed.
 - ☒ The application feels cohesive and enterprise-grade.
-

34. Future Design Roadmap

Post-MVP enhancements may include:

- Light Theme
 - Custom Dashboard Layouts
 - Presentation Mode
 - Saved Views
 - Report Branding
 - Widget Customization
 - Keyboard Shortcuts
 - Multi-language Support
 - Responsive Mobile Experience
-

35. Final Design Identity

Analytics Studio should not resemble a conventional BI dashboard filled with colorful widgets and dense visualizations.

Instead, it should feel like a **modern enterprise decision platform**—clean, restrained, and focused on helping users move confidently from analysis to action.

The guiding experience remains:

 **Upload** → **Understand** → **Predict** → **Decide**

Every design decision should reinforce clarity, trust, and usability, ensuring the interface elevates the insights rather than competing with them.
